AI ENGINEER | PYTHON BACKEND DEVELOPER | GENERATIVE AI DEVELOPER

SUMMARY

I am an AI Engineer and Python Backend Developer passionate about building intelligent software powered by Large Language Models and modern AI technologies. My expertise includes developing AI agents, voice assistants, Retrieval-Augmented Generation (RAG) systems, chatbot automation, RESTful APIs, and scalable backend architectures. I have experience delivering production-ready solutions using Python, FastAPI, LangChain, LangGraph, OpenAI SDK, PostgreSQL, MongoDB, and cloud platforms. I enjoy transforming complex business requirements into efficient AI-powered applications while continuously learning emerging technologies.

STRENGTHS AND EXPERTISE

- Python Development, LangChain & LangGraph, RAG Systems
- FastAPI Development, OpenAI SDK, Git & GitHub
- Machine Learning, Vapi Voice AI, MongoDB & PostgreSQL
- AI Agents, n8n Automation, Cloud Deployment (AWS & Vercel)

PROFESSIONAL EXPERIENCE

CyberGen Pakistan

AI & Backend Developer | August 2025 - September 2025

Designed and developed AI-powered applications and scalable backend systems using Python and FastAPI. Built intelligent AI agents, integrated Large Language Models (LLMs), and developed automation solutions for real-world business use cases.

Key Achievements:

- Developed AI Agents using LangChain, LangGraph, and OpenAI SDK.
- Built RESTful APIs with FastAPI and Python.
- Integrated AI Calling Agents using Vapi Voice AI.
- Developed Retrieval-Augmented Generation (RAG) chatbot solutions.
- Designed backend systems using PostgreSQL and MongoDB.
- Automated business workflows using n8n.
- Deployed production applications on AWS and Vercel.
- Collaborated with frontend developers to integrate AI services.

DevelopersHub

Backend Developer | March 2025 - May 2025

Developed secure backend applications and APIs while ensuring high performance and scalability. Worked closely with AI and frontend teams to build robust software solutions.

Key Achievements:

- Built scalable REST APIs using FastAPI and Python.
- Designed and optimized MongoDB databases.
- Integrated authentication and backend business logic.
- Improved API performance and database queries.
- Implemented Git/GitHub version control workflows.
- Assisted in integrating AI services into backend applications.

PROJECTS

1: AI Calling Agent (Vapi + FastAPI + OpenAI)

Developed a human-like AI voice assistant for appointment booking, customer support, and lead qualification using Vapi, FastAPI, PostgreSQL, and OpenAI.

2: Enterprise RAG Chatbot

Built an LLM-powered chatbot using LangChain, LangGraph, vector embeddings, and OpenAI for answering questions from custom business documents.

3: WhatsApp AI Customer Support Agent

Designed an AI-powered customer support assistant integrated with the WhatsApp Cloud API to automate inquiries and business communication.

4: AI Job Finder

Created an intelligent job recommendation platform that matches resumes with relevant job opportunities using AI-powered analysis.

5: Email Automation Agent

Built an AI email assistant capable of generating, scheduling, and sending personalized emails with workflow automation.

6: n8n Business Automation

Designed multiple automation workflows using n8n for CRM updates, notifications, AI integrations, and business process automation.

7: Machine Learning Projects

Implemented machine learning models for heart disease prediction, face detection, age & gender recognition, and online payment fraud detection.

EDUCATION & CERTIFICATIONS

- Government University of Faisalabad (GCUF) | Bachelor of Science in Software Engineering | 2024 - 2028 (Expected)

- AI & Data Science - SMIT (Saylani Mass IT Training) | Nov 2024 - Aug 2025
- n8n AI Automation Certification
- IEEE Student Membership & Technical Certifications
- IEEE Event Organizer

ACHIEVEMENTS

- 2nd Position - AI Model Training Competition (International Student Convention 2026)
- Participated in multiple lablab.ai AI Hackathons
